The project involved both our three musicians and violinist Marusa, who is a student of the Budapest Academy of Music. The climax, in more ways than one, was the performance of two old standards: a Hungarian “Fruhstuck” and a S [“Strangers In The Night”] by Victor Young. I've commented out the following lines from the original post and added my own lines. // String.format("{0,3:00}", myDateObj); // String.format("{0,3:00}", myDate); This way whenever any format is required this was just done in one line. The answer ended up being (no idea if it's of any value but...) String.format("%s-%s", myDateObj.getYear(), myDateObj.getMonth()); //String.format("%s-%s", myDate.getYear(), myDate.getMonth()); Q: What is the proper method of creating custom text fields in visualforce? I'm working with custom objects for the first time and I was wondering what the correct way to create these custom text fields is. Most examples I've seen use the last field of the Account Object, creating the field in the visualforce page and then just accessing the value for use in the controller code. However, I've also seen examples using a text field (or similar) within the object that stores a field I want to add to the custom object. The custom object has a trigger to enforce a hierarchy on the "value" field, which means that I don't have to manage deleting or changing the values the user puts in (they're stored in

Salesforce, and changed through workflow or other systems). My question is, what is the correct way to create f678ea9f9e
